# VIROON LANGKAEW

Third-year Information Technology and Data Science student seeking a Cooperative and Work-Integrated Education (CWIE) internship in software development. Strong interest in full-stack development, React-based application design, and backend system implementation. I am motivated to apply academic knowledge to real-world projects and gain practical experience with modern software engineering practices.

## TECHNICAL SKILLS

**Programming Languages :** Java, C++, Python, PHP, HTML/CSS, JavaScript
**Frameworks & Libraries :** React, React Router, Context API, Django (Python), RESTful API
**Database Management :** MySQL
**Tools :** VS Code, Git/GitHub
**Design :** Canva

## EDUCATION

**Burapha University, Chanthaburi Campus**

**B.Sc. in Information Technology and Data Science**

**2023 – Present**

**GPA: 2.56**

## LANGUAGE

**Thai: (Native)**

**English : (Basic)**

## EXPERIENCE

### PROJECTS

Online Clothing E-Commerce Platform (Individual Project)

February 2026 – March 2026

- Developed a full-stack e-commerce web application utilizing React (Vite) for the frontend and Node.js (Express) for backend services.
- Implemented secure Authentication and Role-Based Access Control (RBAC) using JWT, managing distinct permissions for Admin, Seller, and Customer roles.
- Leveraged React Context API for efficient global state management, including persistent shopping cart functionality and user session handling.
- Designed and architected a relational database schema on Aiven Cloud (MySQL), managing complex data structures for users, shops, products, and order histories.
- Successfully deployed the production-ready system using Vercel (Frontend) and Render (Backend) to ensure global 24/7 availability.

Technologies Used: React, Node.js, Express.js, MySQL (Aiven Cloud), JWT, Tailwind CSS, Axios, Vercel, Render.

### PROJECTS

Online Clothing E-Commerce Platform (Individual Project)

February 2026 – March 2026

- Developed a responsive weather dashboard using React and Open-Meteo API to fetch and display real-time global weather and 7-day forecasts.
- Implemented dynamic routing via React Router to separate forecast views (hourly/daily) and integrated a global city search feature.
- Built a highly customizable UI featuring dynamic theme switching (e.g., Midnight, Sunset) and temperature unit toggling (°C/°F) for an enhanced user experience.

Technologies Used React, React Router, Open-Meteo API, CSS
